

Lithonia Lighting®

ELM2L | ELM4L

Quantum® LED Emergency Lighting Units

The ELM2L and ELM4L from Lithonia Lighting are aesthetically pleasing emergency LED light fixtures. They provide a minimum of 90 minutes of illumination when there is a loss of power. Both fixtures include a unique track and swivel arrangement which permits full range of direction for lamp head aiming for wall and ceiling mount applications (mounting heights range from 7.5' to 24'), making installation easy while maintaining the maximum path of egress coverage. The linear pattern provides wide uniform distributions that deliver broad spacing up to 67' and low max to min ratios that far exceed code requirements.
